

Tom O'Hanlon

Web Developer

Projects

Portfolio Site

Live site deployed on Vercel

Built in React, Vite, Tailwind, TypeScript

A fully responsive web app used to display my ongoing and finished projects.

In this project I have used Embla Carousel (which utilises the Embla API) and Material UI accordion libraries to display various types of information in certain components.

Employee Satisfaction Survey - in progress

Built in Vite, React, TypeScript, Tailwind, Express, Chart.js

This project is currently a work in progress and has a simple foundation.

There are 6 general questions that pertain to employee satisfaction and the user can use a slider to give a score from 0 - 10. Underneath these questions is a submit button that then saves the user's score and gives them a total.

I will then use Chart.js to map visualise their score.

Hagl - An online estate agency

Code

Built in Next.js, React, TypeScript, Tailwind

Hagl is an online estate agency that works under the premise of cutting out estate agents and letting the seller set their own price and being in control of the process, providing transparency and saving money for all parties.

So far I have utilised the Embla Carousel library and Auth0 for user login.
